Data Quality Assessment

Data Quality Summary:

- Total Records: 541,909
- Missing Customer ID: 135,080
- Missing Description: 1,454
- Negative Quantity: 10,624
- Zero/Negative Unit Price: 2,517

Data Quality Findings:

- The dataset contains 541,909 transaction records, providing a strong basis analysis.
- Approximately 25% of transactions have missing Customer IDs, limiting customer-level analysis.
- 10,624 records contain negative quantities, likely representing returns or cancelled orders.
- 2,517 records have zero or negative unit prices, indicating potential pricing anomalies.
- Missing product descriptions are minimal and have limited impact on overall reporting.

Recommendations:

- Improve customer identification processes to reduce missing customer IDs.
- Separate returns and cancellations from completed sales transactions for clearer revenue reporting.
- Implement validation rules to prevent invalid pricing entries
- Conduct regular data quality audits to maintain reporting accuracy.

Conclusion:

Overall, the dataset is suitable for analysis after cleaning and validation. While missing customer IDs and negative transaction values require attention, the data provides reliable insights into sales performance and customer activity.
